

Sewer Replacement Construction

The 2009-2010 Sewer Replacement project consists primarily of replacing manholes and sanitary sewer lines to near-new condition through the use of trenchless technology and open-trench methods. The trenchless method involves inserting a resin-coated cloth that is steam cured into a solid liner.

What to Expect

- When the sewer line serving your house is being rehabilitated, your sewer service will be temporarily interrupted.
- The contractor will give approximately 48 hours notice prior to beginning work on your block.
- Once notified, try to reduce your water consumption during daytime hours.
- The work affecting your line will be completed on the same day it begins.
- There may be some odor during construction.
- Be patient and allow extra driving time.

For more information, contact:

Ravyn Whitewolf, Engineering Manager, City of Bellingham Public Works Department • 360-778-7900 • pw@cob.org or you can find additional updates at: <http://www.cob.org/government/departments/pw/projects/2009-2010-Sewer-Replacement-Program.aspx>
